

YouTube Video Analysis Report— Data Quality Report

1. Dataset Overview

- Source: Kaggle — YouTube Trending Videos (US)
- Original rows: 40,949
- Clean rows after removing duplicates: 6,282
- Total columns analyzed: 9

2. Data Quality Issues Found

#	Column	Problem	Action Taken
1	video_id	397 invalid #NAME! entries (0.97%)	Left as is — removed in deduplication
2	trending_date	Wrong format (YY.DD.MM)	Fixed using Text to Columns
3	publish_time	Complex timestamp format	Excluded — not needed for analysis
4	tags	Messy mixed language values	Excluded — not needed for analysis
5	video_id	34,667 duplicate rows (84.6%)	Removed — videos trend multiple days

3. Missing Values Summary

Column	Blank Count
video_id	0
trending_date	0
title	0
channel_title	0
category_id	0
views	0
likes	0
dislikes	0
comment_count	0

4. Key Findings

- Top 3 categories: Entertainment, Music, Howto & Style
- Average views (752,097) is 3x higher than median (271,274) — indicating outliers
- 432 videos (6.9%) are viral outliers with views above 2,256,291
- Most viral video reached 39,349,927 views

5. Recommendations

- Use median views instead of average for realistic performance benchmarking
- Treat viral outlier videos separately in any revenue or engagement analysis
- Category ID column should be mapped to category names for better readability
